

REMARKS

5 The Related Applications section has been amended to correct a typographical error in the application number of parent application number 07/722,340, filed June 27, 1991 which is now abandoned, which was incorrectly transcribed as 07/772,340. Also, the fact that 07/722,340 had been abandoned is now included.

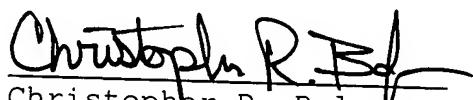

10 The error was realized upon discovery of a notation on the filing receipt regarding an inconsistency of that incorrect application number with the Patent Office records.

15 With this change, the present application now correctly reflects, in this regard, the priority data as printed on the face of the immediate parent patent number 6,736,931, from which the present application is a continuation.

20 Also, the Related Applications section has been amended to include the patent number of 6,736,931 which issued from the immediate parent application 09/970,121.

Respectfully Submitted,

Dated: 10/7/04
